Math Quiz I
• Addition • Subtraction
TO PLAY PRESS BUTTONS
Addition..... 1 4
Subtraction..... 2 4
Hand Controller Action
▪ Twist right—changes units digit.
▪ Twist left—changes 10's digit.
▪ Push left—accesses 100's and 1000's digit. After pushing left:
▪ Twist right—changes 100's digit.
▪ Twist left —changes 1000's digit.
To change units or 10's digit again, push right, then twist
▪ Push down—to enter answer
▪ Pull up—for a new problem
SCORING: 1 point on left for each right answer. 1 point on right for each wrong answer.

----------[VIDEOCART 6: MATH QUIZ]----------

OVERVIEW

The is really nothing special about this game except that it quizzes you on your Addition and Subtraction whereas it's sequel Videocart 7: Math Quiz 2 will quiz you on Multiplication and Division. Some of these answers are tough for those who are just starting to learn math.

CONTROLS

Console and Controller

Twist Left - change the tens digit/thousands digit
Twist Right - change the ones/hundreds digit
Left - Make the hundreds and thousands digits availale to work with
Right - Make the ones and tens digits available to work with.
Plunge Down - answer the question
Pull Up - New problem once a problem is solved
Start - Begin the game/Up the ante on Subtraction
Reset - Go to game select
1 - Addition
2 - Subtraction

GAMEPLAY

This is a pretty much straightforward math game. You are asked a question and your job is to get the correct answer. You have two tries to get it right. If you get it wrong it tells you to try again and if you get it wrong a second time, it will pull up the blackboard screen and solve the problem for you step by step.

First line of business is the start screen. You will see a G? on the screen. Press 1 on the console for Addition problems and 2 on the console for the Subtraction problems. You will then see a screen that says S? Press Start to begin. On the Mess, it's Button 7.

Here is only a brief rundown on how the gaming looks. You will see the math problem and below it you will see two question marks that is underneath them. If you want to up the ante on the subtraction problems, press Start on the console. You can use either control to work the game but is more or less a 1-player game. With that you probably are wondering about the two scores below. The left score represents how many questions you have gotten right. The right score indicates how many questions you have gotten wrong.

It is not totally necessary but here are the tips for playing the Addition and Subtraction games.

Adding...

when you it looks like the sum in one place is going to reach over 9, start over from zero and carry the one over to the next place which means you add 1 to the next place. For example: 65 + 87... 5 + 7 = 12, just place the 2 in the ones spot and add 1 to the tens place. 1 + 6 + 8 = 15, place the 5 into the tens spot and that leaves the one to go into the hundreds spot. Thus the answer is 152.

Subtracting...

When the upper digit is smaller than the lower number, add count the upper digit as having an invisible 1 next too it then subtract it by the lower digit then move over to the next spot and subtract one from the upper digit. For example: 154 - 128... Turn 4 into 14 and subtract by 8 and that leaves us with 6 in the ones spot. Now turn the 5 in the tens spot into a 4 and subtract by 2 thus the answer will be 26 since the 1s will cancel each other out.

The score can go up to 99 before it starts over at zero so you can play a bunch of real life minigames for fun.
